

- excluded for every kernel: $n \leq m^{3/2}$, or $n < 1.83 \cdot 10^{18}$
- $m \leq 10^8$, $n < 10^{2000}$: every point excluded by computation
- needs $m \mid U_1(m)$ with T_1 even: no such kernel in this range
- open: possible only for kernels with $m \mid U_1(m)$
- the known kernel $m \equiv 7 \pmod{8}$ of this kind above $1.5 \cdot 10^{12}$: excluded far beyond the picture
